

The power of meeting room and desk booking in the palm of your hand!

A recent report indicates that flexible working will be the main option for over **70%** of employers by 2020.

## THAT MEANS:

- More mobile device usage
- Demand for ad hoc bookings
- Increased video conferencing
- Need for an optimised user interface.

## THE SOLUTION?

# QUICKBOOK

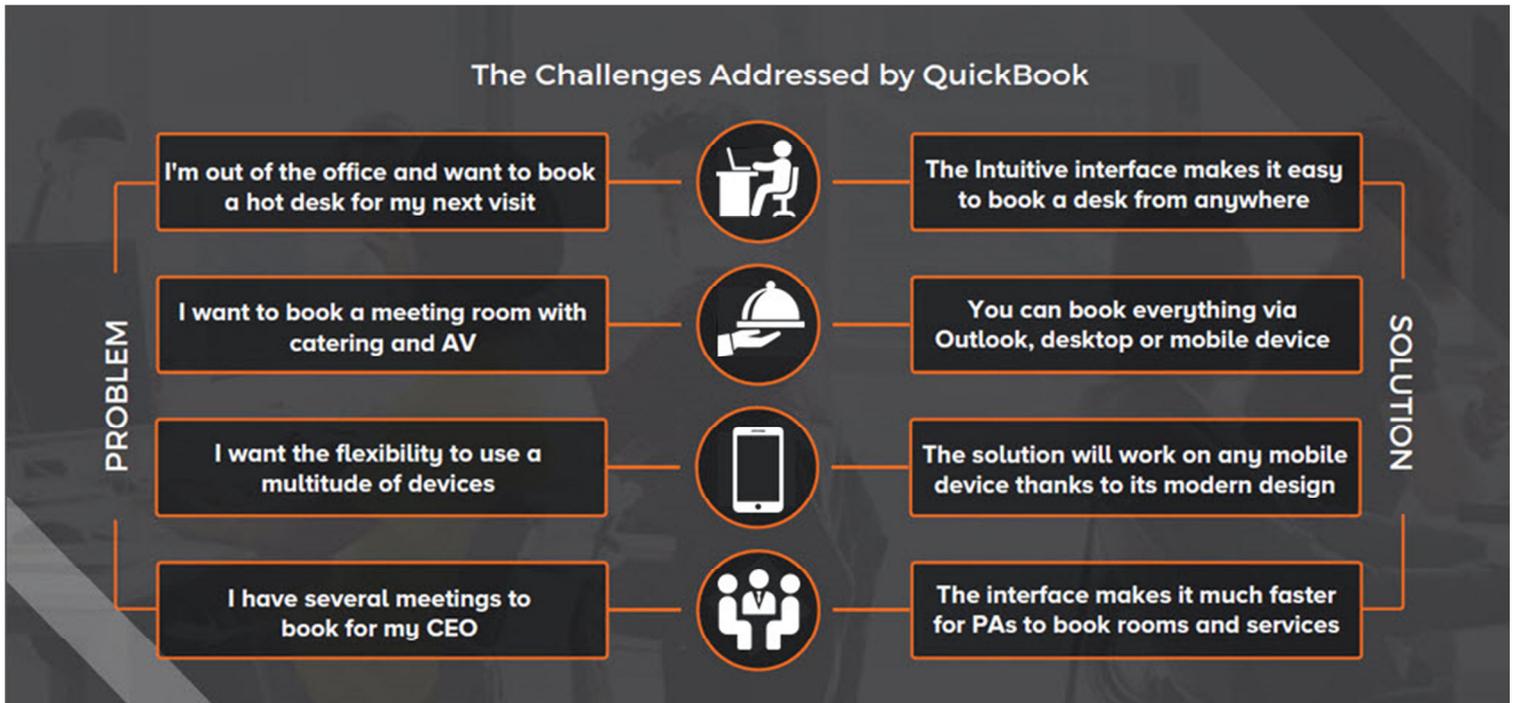

### What makes QuickBook Unique?

---

We live in an increasingly digital world. Enterprise users will soon be moving from an average of three devices used per day to five as the Internet of Things (IoT) becomes mainstream. This puts a strain on organisations, particularly on IT departments, as they struggle to meet this increased demand for high quality business apps.

Recognising this trend, NFS have developed QuickBook which has been designed using the latest web development technologies, such as HTML 5, to provide a powerful room and desk booking solution which works on multiple platforms.

With this flexibility in mind, it works seamlessly with platforms such as Outlook Exchange and, uniquely, Office 365 – it is ideal for mobile workers who are using cloud based solutions.

## What is QuickBook?

QuickBook is affordable, easy to use and powerful – you have full access to the power of the Rendezvous meeting room and desk booking software from an app that can be accessed in seconds.

## Easy to Use

The solution has been designed to work using touch as the primary interface. We have undertaken extensive usability testing to ensure that we offer the most intuitive booking experience. The solution is ideal for agile workers and PAs who want to be able to book rooms, desks and services quickly.

## Powerful

Whilst being easy to use, the solution capitalises on the functionality of the Rendezvous meeting room booking software. For example, PAs can book complex meetings across multiple locations and time zones based on a fast and intuitive user interface.

## Flexible

Whether you have an iPhone, Android or Windows device, the solution will just work straight out of the box and provides the optimal user experience.

## Integrated

Our Rendezvous suite is designed to create a “Connected Workplace”. QuickBook is no exception as it fully integrates with Rendezvous and a range of office platforms such as Outlook 365.

## QuickBook Benefits:

- Advanced scheduling of workspaces and people
- Highly graphical and concurrent view of workspace and people availability
- Seamlessly integrates with Outlook, Exchange and Office 365
- Simplifies the most complex bookings including multi-property and multi-time zone
- Great consistent user experience – works perfectly on any laptop, tablet and smartphone
- No client installation required – it’s all done online
- Easy to make bookings while on the move.
